COMPANY OVERVIEW

Nova Titan Systems LLC is a structured-cabling, network-infrastructure and field-execution provider based in Lubbock, Texas, serving commercial, education, healthcare, government, and industrial clients across West Texas and the broader Texas market. Nova Titan provides field execution and project coordination for structured cabling, network physical infrastructure, and security-related low-voltage scope.

CORE CAPABILITIES

- **Structured Cabling** — Cat5e / Cat6 / Cat6A / fiber, horizontal and backbone cabling, terminations, labeling and project-specific test reports
- **MDF / IDF / Rack Buildout** — telecom room buildout, rack installation, patch panels, cable management, telecom bonding/grounding, backboards
- **Network Physical Infrastructure** — patch panel support, network closet remediation, cabling for network switches and equipment (physical-layer support; configuration coordination as required)
- **Wireless Access Point Support** — WAP cabling, mounting and field coordination; Wi-Fi survey/design services quoted with qualified specialists and defined deliverables
- **Security-Camera Physical Infrastructure** — IP and analog camera cabling, NVR physical-layer rough-in, coordination with licensed integrators
- **Access-Control Cabling / Rough-In** — card reader cabling, door contact and PIR cabling, ACP homerun cabling, IDF/ACP coordination (cabling and physical-layer scope only)
- **Field Technology / Smart Hands** — site surveys, kiosk data cabling, remote-engineer-assisted installs, hardware swap support, dispatch and documentation coordination
- **Firewall Hardware Deployment** — physical installation and hardware replacement, with configuration coordinated through the customer's IT team or qualified support
- **Division 28 Fire-Alarm Coordination** — adjacent low-voltage support and project coordination for fire-alarm scopes; regulated fire-alarm delivery requires a defined scope and appropriately licensed providers

Testing, labeling, photos, as-built information, and closeout documentation are provided as required by the project scope and award — not represented as a uniform deliverable on every engagement.

DIFFERENTIATORS

West Texas Operating Base

Headquartered in Lubbock with project-based field coverage across West Texas and the broader Texas market. Scheduling depends on scope, location, and technician availability.

SBA-Certified HUBZone Small Business

Eligible to compete for HUBZone opportunities where applicable. HUBZone certification may support participation in applicable HUBZone procurement opportunities, subject to the solicitation and acquisition requirements. Effective 2026-06-05 • Renewal 2029-06-05.

Prime Contractor / Subcontractor Support

Nova Titan supports prime contractors as a Division 27/28 subcontractor and may pursue direct opportunities where scope, eligibility, and award requirements are satisfied.

Lean, Coordinated Field Execution

Lean project coordination with scope-specific field execution and documented closeout.

GOVERNMENT & PREVAILING-WAGE READINESS

Prevailing-wage and payroll-documentation requirements are reviewed and incorporated when applicable to the solicitation or award, with qualified subcontractor support engaged where required. SAM.gov registration is active and government/state procurement inquiries are welcomed for scope consistent with current registration and qualifications.

West Texas operating base (Lubbock, Midland/Odessa, Abilene, Big Spring, Amarillo, Brownfield) with project-based Texas and regional field coverage.

NAICS CODE

238210 PRIMARY

Electrical Contractors and Other Wiring Installation Contractors

Solicitation-specific NAICS classifications should be confirmed against the requirement and Nova Titan's current registration information.

Regulated Scope Boundary: Security, access-control and fire-alarm services—including dedicated cabling where regulated—require a defined scope and a verified lawful contracting arrangement with appropriately licensed or registered firms and personnel. Nova's permitted coordination and physical-layer responsibilities are specified per project.
